Version history

Date	Page	Changed	Ver.
June 2021		Add SAE-B flange	1.4
June 2020		Add manual variable maximal displacement option 50V	1.3a
December 2018		Reduced pressure rating of MA2V50, minor fixes	1.2a
April 2018		Minor fixes	1.2
July 2017		First official edition	1.1

"M+S HYDRAULIC" takes no responsibility for possible errors in catalogues, brochures and other printed material.
"M+S HYDRAULIC" reserves the right to alter its products without notice. This also applies to products already on order provided that such alterations can be made without subsequential changes being necessary in specifications already agreed.

Hydraulic Motors Type MA2V

Medium Duty Axial Piston Motors Dual Displacement

open drain line is always required

APPLICATION

- » Agricultural machines
- » Road building machines
- » Food industry machines
- » Swing drives
- » Hydraulic transmissions
- » Special vehicles

OPTIONS

- » Port options
- » Shaft options
- » Integrated valves

ADVANTAGES

- » Smooth operation
- » High power density
- » Compact size

GENERAL

Displacement,	cm ³ /rev [in ³ /rev]	8÷50 [0.48÷3.06]
Max. Speed,	RPM	3500
Max. Torque,	Nm [lb-in]	200 [1770]
Max. Output,	kW [HP]	50 [67]
Max. Pressure Drop,	bar [PSI]	280 [4060]
Max. Oil Flow,	l/min [GPM]	160 [42]
Min. Speed,	RPM	500
Fluid	Mineral based- HLP(DIN 51524) or HM(ISO 6743/4)	
Temperature Range,	°C [°F]	-40÷82 [-40÷180]
Optimal Viscosity Range,	mm ² /s [SUS]	12÷68 [66÷311]
Filtration	ISO code 18/16/13 (Min. recommended fluid filtration of 10 micron)	

Intermittent values

Continuous values

The medium duty design of the MA2V is dual displacement motor with direct control for open and closed circuits. The motor compact construction is cost effective and have got high power / weight ration.

The design of the motor is maintain friendly. We using swash plate witch insure low level of pulsation and noise level.

Torque Constant ***** (for max. displacement)		0.35	0.43	0.502	0.544	0.645	0.716
Nm/bar [lb-in/PSI]		[0.219]	[0.262]	[0.306]	[0.332]	[0.394]	[0.437]
Min. Speed,	[RPM]	500					
Max. Pressure in		5 [70]					
Drain Line,	bar [PSI]	open drain line is always required					
Weight,	kg [lb]	15.6 [34.4]					

* Intermittent speed (flow) is for pressure up to 150[2200] bar[PSI].

** Intermittent load: the permissible values may occur for max. 10% of motor lifetime.

*** Theoretical torque

**** Peak load: the permissible values may occur for max. 1% of every minute.

***** The calculated max values are based on the optimal direction of the forces Fr, Fa and optimal position of the shaft.

***** The constant values are used for calculation of torque and speed with motor efficiencies $\eta_v=0.95$ and $\eta_{ml}=0.9$.

1. The recommended output power for continuous operations should not be exceeded.

2. Recommended filtration as per ISO 4406 cleanliness code 18/16/13 or better. This filtration corresponds to SAE AS 4059 8A/7B/7C. Nominal filtration - 10 micron or better.

3. Recommended a premium quality, anti-wear type mineral based hydraulic oil, HLP(DIN51524) or HM(ISO6743/4).

4. Recommended oil viscosity - 12...68 cSt or see page 25.

5. Recommended maximum system operating temperature - 82°[180°] C[F].

6. To ensure optimum life of the motor, fill it up with fluid prior to load it and run with moderate load and speed for about 10-15 minutes.

7. Using low values of the minimal displacement will decrease the starting torque. It is recommendable to run the vehicle starting from maximal displacement.

Hint: Motor Torque = Torque Constant * Pressure Drop

Rotation Speed = Speed Constant * Oil Flow

The constant values are mentioned for rough calculations. Motor torque and rotation speed for a particular project are depending on the real operating conditions. For more detail calculations please see formulas on page 26.

FUNCTION DIAGRAMS

The below efficiencies are applied to all maximum displacements

VOLUMETRIC EFFICIENCIES

OVERALL EFFICIENCIES

The motor size, pressure, torque, speed of rotation and flow rate required for a specific application can be calculated using the formulas on page [26](#)

Efficiencies for a particular motor may vary from the shown in the diagram depending on the operating conditions.

Parallel key 1/4"x1/4"x1" BS46
- RH** - ø25.4 [1"] Tapered 1:8 [125:1000],
Parallel key 1/4"x1/4"x1", 3/4-16 UNF

Shaft type LD and LF is available only for Pos.1 option SAE B
Shaft type PD;PF and RH is available only for Pos.1
option wheel flange, cartage

Pos.6 - Improved radial load

- omit - standard bearing
- N** - Improved bearing

Pos.7 - Port Size

- 2** - 2xG3/4
- 3** - 2xM27x2
- 4** - 2x1 1/16 -12 UN

Pos.8 - Seal, Corrosion Resistant Seal Surface

- omit - NBR seal type material
- V** - FKM seal type material

Pos.9 - Integrated Valves

- See next page for information about valves
- omit - None
- PU** - Purge valve
- FLU** - Flush valve
- SAR** - Single anti-cavitation and relief valve
- SARF** - Single anti-cavitation, relief and flush valve

Pos.10 - Valve's Port for Single Valves

- omit - None
- A** - Port A
- B** - Port B

Pos.11 - Pressure Setting of Integrated Valves

- omit - None
- x** - For value - see next page

Pos.12 - Flow Setting of Integrated Valves

- omit - None
- Lx** - For value - see next page

Pos.13 - Special Features****

- omit - None
- R2S** - Speed Sensor Two Directional

Pos.14 - Paint and Coating***

- omit - No paint or coating
- P** - Painted
- PC** - Corrosion protected paint

If a painting option is required, the standard color is black-Alkyd-Styrenated Enamel, Black RAL 9005.
Other color by customer's request.

Pos.15 - Design Series

- omit - Factory specified

* For more information about variable option 50V please ask
**The permissible output torque for shafts must not be exceeded!
***Non painted feeding surface
****Available on enquiry

Twin Port	Max. Disp.	Min. Disp.	Shaft PF	Standard Bearing	Port type 4	Painted											

VALVE OPTIONS

The overall dimensions of the motor with integrated valves could vary compared to the standard motors.

Option PU PURGE VALVE

- Mainly used in open loop circuit;
- Used for cooling purpose or oil cleanliness requirements;
- Flow rate by **default (omit)** - **3.5 ÷ 4.9 l/min**
- For other options, please see Pos.12 of ordering code, considering the following possible values:

Pos.12

omit	L2	L6	L7.5
------	----	----	------

 → flow rate

EXAMPLE

MA2VT45-17PF4PU

purge valve flow rate 4.2±0.7 l/min

MA2VT45-17PF4PUL2

purge valve flow rate 2±2.5 l/min

MA2VT45-17PF4PUL7.5

purge valve flow rate 7.5±1 l/min

MA2VT45-17PF4PUL6

purge valve flow rate 6±0.8 l/min

Option FLU FLUSH VALVE

- Mainly used in close loop circuit;
- The valve is a combination between a purge valve and check valve;
- Flow rate by **default (omit)** - **3.5 ÷ 4.9 l/min and cracking (opening) pressure 10.3 bar** with 15 bar feed pressure for close loop circuit.
- For other options, please see Pos.11 and Pos. 12 of ordering code, considering the following possible values:

Pos.11

omit	7
------	---

 → pressure

Pos.12

omit	L2	L6	L7.5
------	----	----	------

 → flow rate

EXAMPLE

MA2VT45-17PF4FLU

flow rate 4.2±0.7 l/min,
crack pressure 10.3 bar

MA2VT45-17PF4FLU7L7.5

flow rate 7.5±1 l/min,
crack pressure 7 bar

MA2VT45-17PF4FLUL2

flow rate 2±2.5 l/min,
crack pressure 10.3 bar

Option SARA, SARB

Combined Anti-Cavitation and Relief Valve

- Anti-cavitation check valve is used for applications such as Fan drive control;
- Pressure relief valves prevent excessive pressures in the high pressure loop.

SARA

SARB

Please, consider the following possible values:

Pos.11

280	300	345
-----	-----	-----

 → pressure

EXAMPLE

MA2VT45-17PF4SARA280

Single Anti-Cavitation and Relief Valve, relief valve setting 280 bar
The valve is placed on port A

MA2VT45-17PF4SARB300

Single Anti-Cavitation and Relief Valve, relief valve setting 300 bar
The valve is placed on port B

VALVE OPTIONS

The overall dimensions of the motor with integrated valves could vary compared to the standard motors.

Option SARFA, SARFB

Single Anti-Cavitation, Relief and Flush Valve

- Mainly used in close loop circuit;
- The valve is a combination between a dual anti-cavitation, relief and flush valve;
- Flush valve is used for cooling purpose or cleanliness requirements;
- Anti-Cavitation Check valve is used for applications such as Fan drive control;
- Pressure Relief Valves prevent excessive pressures in the high pressure loop;
- Please, consider the following possible values for pressure set of the relief valve:

Pos.11

280	300	345
-----	-----	-----

 → pressure

- Flow rate of flush valve by **default (omit)** - **3.5 ÷ 4.9 l/min** and **cracking pressure 10.3 bar** with 15 bar feed pressure for close loop circuit.

The possible values are as follow:

Pos.12

omit	L2	L6	L7.5
------	----	----	------

 → flow rate

- Other values for **cracking** pressure are possible. Please see Pos.11.
- Example: For cracking pressure 7 bar the options are as follow:

Pos.11

280-7	300-7	345-7
-------	-------	-------

Relief valve opening pressure Flush valve cracking pressure (charge pressure)

EXAMPLE

MA2VT45-17PF4SARFA345

Single Anti-Cavitation, Relief and Flush Valve, relief valve setting 345 bar
flush valve cracking pressure 10.3 bar, flush valve flow rate 4.2±0.7 l/min
The valve is placed on port A

MA2VT45-17PF4SARFB345-7

Single Anti-Cavitation, Relief and Flush Valve, relief valve setting 345 bar
flush valve cracking pressure 7 bar, flush valve flow rate is 4.2±0.7 l/min
The valve is placed on port B

MA2VT45-17PF4SARFA280L2

Single Anti-Cavitation, Relief and Flush Valve, relief valve setting 280 bar
flush valve cracking pressure 10.3 bar, flush valve flow rate is 2±2.5 l/min
The valve is placed on port A

MA2VT45-17PF4SARFB300-7L7.5

Single Anti-Cavitation, Relief and Flush Valve, relief valve setting 300 bar
flush valve cracking pressure 7 bar, flush valve flow rate 7.5±1 l/min
The valve is placed on port B

OPTION 50V

Manual Variable Displacement

SPEED SENSORS

MOUNTING DIMENSIONS AND INSTALLATION

MA2V with R2S - Dual Channel Hall Sensor

Output Pulses per revolution	45
------------------------------	----

INSTALLATION

1. Remove the plug.
2. Screw in the (CW) sensor by hand until the bottom end gently touches the speed ring.
3. Unscrew (CCW) sensor 1/4 turn. Continue unscrew until the flats are perpendicular to motor or pump shaft center line (tolerance 20° to 30° is acceptable). Do not unscrew the sensor more than 3/4 of a turn from the touching.
4. Using the 1/2" wrench to hold the sensor, tighten the lock nut to 10⁺⁵ Nm [115 lb-in]. with an 11/16" hew wrench.

NOTE: The speed sensor is not fitted at the factory, but is supplied in plastic bag with the motor.
For installation see enclosed insructions.

SPEED SENSORS R2S

TECHNICAL DATA OF THE DUAL CHANNEL HALL SPEED SENSOR

Power supply	4.5 ... 30 VDC
Power consumption	< 15 mA without load
Pin connector	universal /PUSH-PULL/ 4P Delphi Connector DJ3042-2.5-21
Output measurements	Speed, Direction
Output maximum current	100 mA
Resident output voltage	1.5 V with 100 mA of the output 0.5 V without load of the output
Frequency range	0 ... 15 000 Hz
Degree of protection	IP 67
Temperature	-40 ... + 100 °C
Humidity	0 ... 95% RH

INSTALLATION

At start-up and during operation the motor housing has to be filled up with hydraulic fluid. Start-up has to be carried out at low or moderate speed and without load (for example 1000 rpm and pressure 50 [725] bar [PSI]) till the motor and the hydraulic scheme are filled up with oil. Generally the start-up needs 10-15 minutes to finish. The leakage oil in the housing has to be discharged to the tank through the highest positioned drain port T. The max. pressure in the drain line is 5 [70] bar [PSI].

Installation below the tank level (recommended)

- Fill up the axial piston motor before the start-up through the highest positioned drain port T;
- Operate the motor at low speed till the motor system is completely filled up;
- The minimum immersion depth of the drain line in the tank is 200 mm relative to the minimum oil level in the tank.

Installation on top of the tank level

- Fill up the axial piston motor before the start-up through the highest positioned drain port T;
- Operate the motor at low speed till the motor system is completely filled up;
- The minimum immersion depth of the drain line in the tank is 200 mm relative to the minimum oil level in the tank.

FLUID VISCOSITY LIMITS

In order to obtain optimum efficiency and service life, we recommend to select the operating viscosity (at operating temperature) within the range shown on diagram below.

Kinematic viscosity

Temperature

The above - shown viscosity characteristics are for reference only. Please, check the actual viscosity with the manufacturer of the fluid.

BASIC FORMULAS

The motor size, pressure and flow required for a specific application can be calculated using the formulas below.

Metric System

Efficiency $\eta_t = \eta_{mh} \cdot \eta_v$ $\eta_{mh} = \frac{\eta_t}{\eta_v}$ $\eta_v = \frac{\eta_t}{\eta_{mh}}$

Input flow $Q = \frac{Vg \cdot n}{1000 \cdot \eta_v}$ [l/min]

Output torque $M = \frac{Vg \cdot \Delta p \cdot \eta_{mh}}{62,8}$ or $M = \Delta p \cdot T_{con.}$ [Nm]

Output power $P = \frac{M \cdot n}{9550} = \frac{Q \cdot \Delta p \cdot \eta_t}{600}$ [kW]

Speed $n = \frac{Q \cdot 1000 \cdot \eta_v}{Vg}$ or $n = Q \cdot N_{con.}$ [min⁻¹]

Vg = Displacement per rev. [cm³]

Δp = $p_{HP} - p_{LP}$ [bar]

p_{HP} = High pressure [bar]

p_{LP} = Low pressure [bar]

n = Rotation speed [RPM]

Q = Oil flow [l/min]

$T_{con.}$ = Toque constant [Nm/bar]

$N_{con.}$ = Speed constant [RPM/(l/min)]

η_v = Volumetric efficiency

η_{mh} = Mechanical-hydraulic efficiency

η_t = Overall efficiency

Inch System

Efficiency $\eta_t = \eta_{mh} \cdot \eta_v$ $\eta_{mh} = \frac{\eta_t}{\eta_v}$ $\eta_v = \frac{\eta_t}{\eta_{mh}}$

Input flow $Q = \frac{Vg \cdot n}{231 \cdot \eta_v}$ [GPM]

Output torque $M = \frac{Vg \cdot \Delta p \cdot \eta_{mh}}{2 \cdot \pi}$ or $M = \Delta p \cdot T_{con.}$ [lb-in]

Output power $P = \frac{Vg \cdot n \cdot \Delta p \cdot \eta_t}{396000}$ [hp]

Speed $n = \frac{Q \cdot 231 \cdot \eta_v}{Vg}$ or $n = Q \cdot N_{con.}$ [min⁻¹]

Vg = Displacement per rev. [in³]

Δp = $p_{HP} - p_{LP}$ [PSI]

p_{HP} = High pressure [PSI]

p_{LP} = Low pressure [PSI]

n = Rotation speed [RPM]

Q = Oil flow [GPM]

$T_{con.}$ = Toque constant [lb-in/PSI]

$N_{con.}$ = Speed constant [RPM/GPM]

η_v = Volumetric efficiency

η_{mh} = Mechanical-hydraulic efficiency

η_t = Overall efficiency

Depending on the results of the load calculations, the most appropriate type of motor from the catalogue is selected.

Table 1

Rolling resistance coefficient In case of rubber tire rolling on different surfaces			
Surface	ρ	Surface	ρ
Concrete- faultless	0.010	Macadam- bad	0.037
Concrete- good	0.015	Snow- 5 cm	0.025
Concrete- bad	0.020	Snow- 10 cm	0.037
Asphalt- faultless	0.012	Polluted covering- smooth	0.025
Asphalt- good	0.017	Polluted covering- sandy	0.040
Asphalt- bad	0.022	Mud	0.037÷0.150
Macadam- faultless	0.015	Sand- Gravel	0.060÷0.150
Macadam- good	0.022	Sand- loose	0.160÷0.300

APPLICATION FORMULAS

1. Motor speed: n, RPM

$$n = \frac{2,65 \cdot v_{km} \cdot i}{R_m}$$

$$n = \frac{168 \cdot v_{mi} \cdot i}{R_{in}}$$

v_{km} - vehicle speed [km/h]

v_{mi} - vehicle speed [mi/h]

R_m - wheel rolling radius [m]

R_{in} - wheel rolling radius [in]

i - gear ratio between motor and wheels.

If no gearbox, use $i=1$.

2. Rolling resistance: RR, daN [lbs]

The resistance force resulted in wheels contact with different surfaces:

$$RR = G \cdot \rho$$

G - total weight loaded on vehicle, daN [lbs];

ρ - rolling resistance coefficient (Table 1).

3. Grade resistance: GR, daN [lbs]

$$GR = G \cdot (\sin \alpha + \rho \cdot \cos \alpha)$$

α - gradient negotiation angle (Table 2)

Table 2

Grade %	α Degrees	Grade %	α Degrees
1%	0° 35'	12%	6° 5'
2%	1° 9'	15%	8° 31'
5%	2° 51'	20%	11° 19'
6%	3° 26'	25%	14° 3'
8%	4° 35'	32%	18°
10%	5° 43'	60%	31°

Table 3

Surface	Frictional factor f
Steel on steel	0.15 ÷ 0.20
Rubber tire on polluted surface	0.5 ÷ 0.7
Rubber tire on asphalt	0.8 ÷ 1.0
Rubber tire on concrete	0.8 ÷ 1.0
Rubber tire on grass	0.4

4. Acceleration force: FA, daN [lbs]

Force **FA** necessary for acceleration from 0 to maximum speed **v** and time **t** can be calculated with a formula:

$$FA = \frac{v_{km} \cdot G}{36 \cdot t \cdot 10} \text{ [daN]} \quad FA = \frac{v_{mi} \cdot G}{2,2 \cdot t} \text{ [lbs]}$$

FA - acceleration force, daN [lbs]

t - time, [s]

5. Tractive effort: DP, daN [lbs]

Tractive effort **DP** is the additional force of trailer. This value will be established as follows:

-acc.to constructor's assessment;

-as calculating forces in items 2, 3 and 4 of trailer. The calculated sum corresponds to the tractive effort requested.

6. Total tractive effort: TE, daN [lbs]

Total tractive effort **TE** is total effort necessary for vehicle motion; that the sum of forces calculated in items from 2 to 5 and increased with 10 % because of air resistance.

$$TE = 1,1 \cdot (RR + GR + FA + DP)$$

RR - force required to overcome the rolling resistance;

GR - force required to slope upwards;

FA - force required to accelerate (acceleration force);

DP - additional tractive effort (trailer).

7. Motor Torque moment: M, daNm [in-lb]

Necessary torque moment for every hydraulic motor:

$$M = \frac{TE \cdot R_m [R_{in}]}{N \cdot i \cdot \eta_M}$$

N - motor numbers;

η_M - mechanical gear efficiency (if it is available).

8. Cohesion between tire and road covering: M_w, daNm [in-lb]

$$M_w = \frac{G_w \cdot f \cdot R_m [R_{in}]}{i \cdot \eta_M}$$

To avoid wheel slipping, the following condition should be observed $M_w > M$

f - frictional factor;

G_w - total weight over the wheels, daN [lbs].

9. Radial motor loading: P_{rad}, daN [lbs]

When the motor is used for motion with a ring or gear mounted directly on the motor shaft, the total radial load of the motor shaft **P_{rad}** is the sum of the motion force and the weight force acting on the ring.

G_w - Weight held by wheel;

P_{rad} - Total radial loading of motor shaft;

M/R - Motion force.

$$P_{rad} = \sqrt{G_w^2 + \left(\frac{M}{R}\right)^2}$$

Depending on the results of the load calculations, the most appropriate type of motor from the catalogue is selected.

WARRANTY

M+S Hydraulic warrants, that its products, supplied directly to original equipment manufacturer, authorized distributor or other customer, will be free of defects in material or workmanship at the time of shipment from M+S Hydraulic and will conform to the products technical documentation (drawings and specifications) under sale agreement with Buyer.

This warranty will apply only to defects appearing within applicable Warranty period, mentioned below. If Buyer notifies M+S Hydraulic within the Warranty period about any such defects, M+S, at its sole option will replace or repair the defective products or their parts found by M+S Hydraulic to be defective in material or workmanship.

THE FOREGOING LIMITED WARRANTY IS AVAILABLE ONLY IF "M+S HYDRAULIC" IS PROMPTLY NOTIFIED IN WRITTEN OF THE ALLEGED DEFECT AND DOES NOT COVER FAILURE TO FUNCTION CAUSED BY DAMAGE TO THE PRODUCT, IMPROPER INSTALLATION, UNREASONABLE USE OR ABUSE OF THE PRODUCT, FAILURE TO PROVIDE OR USE OF IMPROPER MAINTENANCE OR USUAL, DEGRADATION OF THE PRODUCT DUE TO PHYSICAL ENVIRONMENTS OF AN USUAL NATURE. THE FOREGOING REMEDIES ARE THE SOLE AND EXCLUSIVE REMEDIES AVAILABLE TO CUSTOMER. To facilitate the inspection, M+S Hydraulic may require return of the product/part, which Buyer claims to be defective.

M+S Hydraulic shall not be liable for labor costs or any other expenses incurred during the disassembling or reinstalling of the product/part.

In case the claimed products are returned to M+S Hydraulic in bad condition: dirty, disassembled, with damaged or missing parts during transportation, the warranty will be considered as not applicable and the products will not be liable to repair.

Warranty periods

New products: The Warranty period is limited to 24 consecutive months (2 years) from the date of production of the product.

Repaired products: If the product is repaired in M+S Hydraulic during its warranty period, the warranty period of the repaired item shall continue for the balance of original Warranty period or for a period equal to 50% of the original new product Warranty period, whichever is later.

Spare parts: The Warranty period for Spare parts is 12 consecutive months (1 year) from the dispatch date of such parts from M+S Hydraulic.

LIMITATION OF LIABILITY M+S Hydraulic's liability for claim of any kind, for loss or damage arising out of, connected with or resulting from an order, or from the performance or branch thereof, or from the design, manufacture, sale delivery, operation or use of any of its products shall be limited to, at M+S 's sole option, replacement, repair of any defective product or the issuance of a credit to Customer against any future purchases. Cash refunds will not be made under any circumstances and Customer will not be entitled to recover any damages of any kind against M+S Hydraulic, including but not limited to incidental or consequential damages, whether direct or indirect, known or unknown, foreseen or unforeseen.

HES HYDRAULIC ELEMENTS AND SYSTEMS OVERVIEW

Hydraulic Elements and Systems PLC is a public stock company located in the town of Yambol, South-East Bulgaria. The factory has a long history and traditions in the design and manufacture of hydraulic cylinders. The product range includes Piston cylinders, Telescopic cylinders, Plunger cylinders and Rack cylinders.

M+S HYDRAULIC OVERVIEW

M+S Hydraulic is a leading manufacturer of Hydraulic Motors, Hydrostatic Steering Units and accessories, Hydraulic brakes Motor-brakes and Valve Blocks in Europe and all over the world.

The main advantage of our company is that we offer hydraulic solutions to the specific needs of the customers meeting their technical requirements thanks to the various product's options. M+S Hydraulic commodities are guaranteed with after-sales services, technical support and warranty period of 24 months.

M+S Hydraulic has an enlarging world-wide distributors' network. The company has Agency contracts and Consignment agreements with more than 35 companies in the world. We have the know-how to develop solutions for productivity and efficiency on every continent.

M+S HYDRAULIC - DEVOTED TO THE QUALITY
